

Clinic Appointment Management System

- User Stories

This document outlines the user stories for the three roles in the clinic appointment management system: Doctor, Receptionist, and System Administrator.

Doctor User Stories

1. View Appointments

As a Doctor, I want to view my upcoming appointments so that I can prepare for patient visits.

2. View Patient Info

As a Doctor, I want to view the basic information of the patient (e.g., name, age, contact) so that I can understand the context before the consultation.

3. Add Visit Notes

As a Doctor, I want to add medical notes or a summary for each appointment so that I can keep a record of the patient's visit and follow up later.

4. Update Appointment Status

As a Doctor, I want to mark an appointment as completed or missed so that the system reflects the accurate status.

Receptionist User Stories

1. Login to the System

As a Receptionist, I want to log into the system securely so that I can access my dashboard and start my tasks.

2. Create a New Appointment

As a Receptionist, I want to book a new appointment for a patient with a doctor so that I can schedule their visit efficiently.

3. Reschedule or Cancel Appointments

As a Receptionist, I want to edit or cancel appointments so that I can handle changes in patient or doctor availability.

4. Register New Patient

As a Receptionist, I want to register a new patient so that they can book appointments and be managed in the system.

5. Search for Patients or Doctors

As a Receptionist, I want to search for existing patients and doctors so that I can quickly find their records and schedule appointments.

6. View Today's Appointments

As a Receptionist, I want to view the schedule of all appointments for today so that I can manage check-ins effectively.

🔧 System Administrator User Stories

1. Create User Accounts

As a System Administrator, I want to create new user accounts for doctors and receptionists so that they can access the system.

2. Assign Roles

As a System Administrator, I want to assign appropriate roles to users so that they have the correct access level.

3. View All Appointments

As a System Administrator, I want to view and manage all appointments in the system so that I can monitor operations.

4. Configure System Settings

As a System Administrator, I want to set clinic working hours, holidays, and other system settings so that the application behaves according to clinic policy.

5. Manage Users

As a System Administrator, I want to edit or deactivate user accounts so that I can control access to the system.
